FACILITY SITE IDENTIFICATION
DATA STANDARD

Standard No.: EX000020.2

January 6, 2006

This standard has been produced through the Environmental Data Standards Council (EDSC).

The Environmental Data Standards Council (EDSC) is a partnership among US EPA, States and Tribal partners to promote the efficient sharing of environmental information through the development and adoption of data standards. More information about the EDSC is available at www.envdatastandards.net.
Foreword
The Environmental Data Standards Council (EDSC) identifies, prioritizes, and pursues the creation of data standards for those areas where information exchange standards will provide the most value in achieving environmental results. The Council involves state and federal agencies, tribes and tribal nations in the development of the standards and then provides the draft materials for general review. Business groups, non-governmental organizations, and other interested parties may then provide input and comment for Council consideration and standard finalization. Draft and final standards are available at http://www.envdatastandards.net.

1.0 INTRODUCTION
The purpose of this standard is to identify a facility of environmental interest. Adoption of the standard will help US EPA, Tribes, and States integrate and share facility information across multiple information systems, programs, and governments.

This standard provides for the unique identification of facilities regulated or monitored by US EPA, Tribes, and States. Each facility is assigned a unique facility identification number, which identifies information for the facility specified.

1.1 Scope
This standard provides and describes data groupings that are used to exchange facility site identification data and information.

1.3 References to Other Data Standards
This data standard relies on other data standards to make it complete and to provide the necessary support. As such, users should reference the normative standards, listed below, and consider them integral to the Facility Site Identification Data Standard.

- Contact Information [EX000019.2] Data Standard
- Latitude/Longitude [EX000017.2] Data Standard
- Standard Industrial Classification (SIC)/North American Industry Classification System (NAICS) [EX000022.2] Data Standard
- Representation of Date and Time [EX000013.1] Data Standard.

1.4 Terms and Definitions
For the purposes of this document, the following terms and definitions apply.
Facility Site Identification Data Standard
Std No.: EX000020.2

Term | Definition
--- | ---
Facility | A distinct real property entity (i.e., a man-made object and its surrounding real estate).

Note 1. Facilities incorporate the characteristics of being: (1) objects, established at (2) specific places, for (3) specific purposes.

Note 2. For the purposes of this standard, a facility can include monitoring stations, waste sites, and other entities of environmental interest that cannot be classified as single facilities.

Federal Facility | A facility (or the land it occupies that is owned or operated by the Federal Government.

Facility Registry System | A centrally managed database of authoritative information that identifies facilities that are regulated or of environmental interest to US EPA programs or delegated states.

1.5 Implementation

Users are encouraged to use the XML registry housed on the Exchange Network Web site to download schema components for the construction of XML schema flows (http://www.exchangenetwork.net).

1.6 Document Structure

The structure of this document is briefly described below:

a. Section 2.0 Facility Site Identification Diagram, illustrates the principal data groupings contained within this standard.

b. Section 3.0 Facility Site Data Standards Table, provides detailed information on the high level, intermediate and elemental Facility Site data groupings. Where applicable, for each level of this data standard a definition, XML tag, note(s), example list of values and format are provided. The format column may include the number of characters for the associated data element, where “A” specifies alphanumeric, “N” designates numeric, and “Graphic” designates a diagram or other graphic related binary object.

c. Data Element Numbering. For purposes of clarity and to enhance understanding of data standard hierarchy and relationships, each data group is numerically classified from the primary to the elemental level.

d. Code and Identifier Metadata: Metadata, defined here as data about data or data elements, that includes their descriptions and/or any needed context setting information required to identify the origin, conditions of use, interpretation, or understanding the information being exchanged or transferred. (Adapted from ISO/IEC 2382-17:1999 Information Technology Vocabulary—Part 17: Databases 17.06.05 metadata). Based on the business need, additional metadata may be required to sufficiently describe an identifier or a code. A note regarding this additional metadata is included in the notes column for identifier and code elements. Additional metadata for identifiers may include:

• Identifier Context, which identifies the source or data system that created or defined the identifier

Additional metadata for codes may include:

• Code List Identifier, which is a standardized reference to the context or source of the set of codes

• Code List Version Identifier, which identifies the particular version of the set of codes.
• Code List Version Agency Identifier, which identifies the agency responsible for maintaining the set of codes
• Code List Name, which describes the corresponding name for which the code represents

e. Appendix A Facility Site Identification Data Structure Diagram, illustrates the hierarchical classification of the facility site data standard. This diagram enables business and technical users of this standard to quickly understand its general content and complexity.

f. Appendix B, lists the references for Facility Site Identification Data Standard.

2.0 FACILITY SITE IDENTIFICATION DIAGRAM

This diagram specifies the major data groups that may be used to identify the characteristics and/or to catalog a facility site.
3.0 FACILITY SITE DATA STANDARD TABLE

1.0 Facility Site

Definition: Basic identification information for a facility site, including the facility registry identifier, geographic address, and geopolitical descriptors.

Relationships:
- Each Facility Site may be involved with one or more Affiliation(s).
- Each Facility Site may be classified by one or more Standard Industrial Classification (SIC) codes.
- Each Facility Site may be classified by one or more North American Industry Classification System (NAICS) codes.
- Each Facility Site may be geographically located by one or more Geographic Coordinates.
- Each Facility Site must be monitored by one or more Environmental Interest(s).

Notes: None

XML Tag: FacilitySite

2.0 Facility Site Geographic Coordinates

Definition: A geographic point, or set of points, defined by latitude and longitude coordinates used to locate a facility site, usually the front door or centroid, including the associated method, accuracy, and description data.

Relationships: Each Geographic Coordinates occurrence must geographically locate one and only one Facility Site occurrence.

Note 1: There can be multiple Geographic Coordinates associated with a Facility Site, however each instance of a Geographic Coordinate can only be associated with one Facility Site occurrence.

Note 2: Refer to Geographic Address Data Block in the Latitude/Longitude [EX000017.2] Data Standard

The following items are expected to define the facility geographic coordinates information needed for Section 2.0:
- Latitude Measure
- Longitude Measure
- Horizontal Accuracy Measure
- Geometric Type
  - Geometric Type Code
  - Geometric Type Name
- Horizontal Collection Method
  - Horizontal Collection Method Code
  - Horizontal Collection Method Text
- Horizontal Reference Datum
  - Horizontal Reference Datum Code
  - Horizontal Reference Datum Name
- Reference Point
  - Reference Point Code
  - Reference Point Text

XML Tag: FacilitySiteGeographicCoordinates
3.0 Facility Site Affiliation

Definition: The relationship between a facility site and an organization and/or an individual person.

Relationships:

- Each Affiliation occurrence must be established with one and only one Facility Site occurrence.
- Each Affiliation occurrence may involve one and only one Organization occurrence.
- Each Affiliation occurrence may involve one and only one Individual occurrence.
- Each Affiliation occurrence may receive mail at one and only one Mailing Address occurrence.

Note 1: There is no requirement that the affiliation must exist; however, if an affiliation exists, it must be associated with one and only one Facility Site.

Note 2: An Organization may participate with multiple Facility Sites.

Note 3: Each type of affiliation can exist more than once for a facility site; thus, there can be two occurrences of the Legally Responsible Entity affiliation type with a Facility Site.
