

# Environmental Information Exchange Network

- Overview and Discussion of Registry

Molly O'Neill, State Director,  
Network Steering Board

Pat Garvey, EPA Director,  
Network Steering Board

# Data Exchange Templates/ XML Schema

## Data Exchange Templates

- Describe format of data being exchanged
- Consist of XML schema
- Draw upon data standards
- Potential to reuse XML schema modules

Schema are developed for each exchange type (e.g., Discharge Monitoring Report data)

# How the pieces fit together

## State Environmental Department

State systems may or may not be integrated.

## EPA

# Exchange Network Registry

---

- TRG – completed a requirements analysis for all functionality needed and desired
  - Unfortunately, the current market hasn't “demonstrated” Registry software to meet all requirements
  - Until market catches up, TRG offered an interim solution to meet minimum requirements that would utilize an existing framework.
  - Interim solution utilizes exchange network website ([www.exchangenetwork.net](http://www.exchangenetwork.net)) and the existing U.S. EPA, Environmental Data Registry.

## XML Registry

Welcome to the interim XML Registry for the Environmental Information Exchange Network. This Registry will provide the capability to share information about XML Data Exchange Template (DETs), XML Schemas, Namespaces, WSDL files, and other supporting files needed to map data flows between partners. The Registry will contain information about schemas approved for use on the Network, as well as information about schemas under development. In time, the XML Registry will provide a clearinghouse for information related to data flows on the Network.

### Data Submission

Registration of new schema information in the interim XML Registry can be done using a spreadsheet data template. Below is the draft data input template and an example template for FRS schema data.

- [Draft Data Template \(.xls\)](#)
- [Data Template with Example FRS Schema Data \(.xls\)](#)

To submit new information please contact: Larry Fitzwater via email at [fitzwater.larry@epa.gov](mailto:fitzwater.larry@epa.gov) or at 202-566-1653.

### XML Object Search

XML Registry - Microsoft Internet Explorer

Address: [http://oaspub.epa.gov/emg/xmlsearch\\$.startup](http://oaspub.epa.gov/emg/xmlsearch$.startup)

### XML Object Search

A complete list of registered [DETs/XML Schemas](#) for major Network data flows are available. XML Object Search can access all information in two ways:

- To search for a specific word or phrase, enter text (e.g., water) or a text string (e.g., Water Quality) in the keyword field. The search will query all XML object types, unless a specific XML object type (e.g., XML Schema) is selected from the pull-down list. The keyword portion of the XML object search queries all text fields (e.g., name, acronym, abstract, etc.).
- To obtain a complete list of XML Objects by type (e.g., XML Schema), select type from the pull-down list and leave the keyword field blank.

Keyword:

Search Options:  Containing  Beginning With  Exact Match

Type:

Exchange Network
