

Exchange Network Laboratory Compliance Monitoring Data (CMD) Portal

Roger Howard
To
ENLC/NTB Meeting
June 20, 2013
Washington, DC

What is the Exchange Network Laboratory Compliance Monitoring Data Portal Project?

- Compliance Monitoring Data Portal will supply a web application that will provide a single location for laboratories and utilities to submit drinking water system sampling data.
- Drinking water systems, states and EPA will be able to retrieve this information for various purposes including, tracking, analysis and oversight.

Exchange Network Laboratory CMD Portal – Status

- Exchange Network Portal Grant (\$347k) was awarded last year to Kansas and three other States (IN, LA, and NY) to develop the following capabilities:
 - Provide the capability for the participating states and private laboratories and utilities responsible for testing water samples in those states to submit and retrieve compliance monitoring data directly to and from a cloud-based CMD Portal
 - Provide the capability for the CMD Portal to interact with State managed monitoring schedules in NextGen

Exchange Network Laboratory CMD Portal – Status (cont'd)

- In late 2012, the Kansas central IT Office decided not to proceed with grant project activity until there was a long term plan for maintaining the CMD Portal
- States agreed to transfer EN funds to EPA, for EPA to provide in kind services for the development of the Portal
- Awaiting formal approval from two states (IN and NY) to authorize EPA to lead development
- When complete, the Laboratory CMD portal will be available for use by all states

Exchange Network CMD Portal

– Upcoming Activities

Establish Workgroup

Kick-Off Call with Workgroup

Draft and Review Charter

Begin Development

Projected
Lab CMD Portal
Sprint start date:
April 2014
